

HOWTO check up on jobs

From HPC

Contents

- 1 Examining the queue
- 2 Checking a specific job
- 3 Deleting a job you no longer want
- 4 Overview of cluster usage

Examining the queue

You can look at the queue by using the `qstat` command. `qstat` will display the queue ordered by JobID.

```
[username@hpc1 ~]$ qstat
Job id      Name          User          Time Use S Queue
-----
32.hpc1     JobName       username      351:04:3 R long
33.hpc1     JobName       username      351:06:1 R day
34.hpc1     JobName       username      390:30:2 R week
40.hpc1     JobName       username      496:38:2 R month
46.hpc1     JobName       username      506:13:5 R long
```

Checking a specific job

If you want to see the details of a specific job, use `qstat -fx <JobID>` on it:

```
[username@hpc1 ~]$ qstat -fx 40
```

If you want to look at the output of your job while it's still running, use the `qpeek` command.

```
[username@hpc1 ~]$ qpeek 40
```

Deleting a job you no longer want

If you want to delete a job (whether it's already running or not), use the `qdel` command:

```
[username@hpc1 ~]$ qdel 41
```

There's no output on a successful job deletion. Keep in mind that when running jobs are killed, **files in scratch space will not sync back to your home directory**. Orphaned scratch space will be moved to `/orphans`.

Overview of cluster usage

`pestat` gives a nice overview of which nodes are busy with which jobs for which users.

```
[username@hpc1 ~]$ pestat
Queues:  short day week month long
Node      state  cpu      memory  jobids/users
-----
comp001.hpc  busy   8    8    15G  51%  34
comp002.hpc  free  64   60  126G  12%  35 36 37 38
```

```
[username@hpc1 ~]$ pestat -u username
Queues:  short day week month long
Node      state  cpu      memory  jobids/users
-----
          tot used  tot used
comp001.hpc  busy    8    8    15G  51%  34
comp002.hpc  free   64   60   126G  12%  38
```

```
[username@hpc1 ~]$ pestat -a -u username
Queues:  short day week month long
Node      state  cpu      memory  jobids/users
-----
          tot used  tot used
comp001.hpc  busy    8    8    15G  51%  34 username
comp002.hpc  free   64   60   126G  12%  38 username
```
